

RWorksheet_Cartoja#5

Jhona Mae Cartoja

2022-11-22

1. The table shows the enrollment of BS in Computer Science, SY 2010-2011.

```
enrollment <- data.frame("Course Year" = c("1st", "2nd", "3rd", "4th"), " 2019-2020" = c(80, 75, 70, 60))
enrollment
```

```
##   Course.Year X.2019.2020
## 1         1st           80
## 2         2nd           75
## 3         3rd           70
## 4         4th           60
```

a. Plot the data using a bar graph. Write the codes and copy the result.

```
barplot_data <- c("1st" = 80, "2nd" = 75, "3rd" = 70, "4th" = 60)
barplot_data
```

```
## 1st 2nd 3rd 4th
## 80 75 70 60
```

```
barplot(barplot_data)
```

b. Using the same table, label the barchart with Title = " Enrollment of BS Computer Science" horizontal axis = "Curriculum Year" and vertical axis = "number of students"

```
barplot_tab <- c("1st" = 80 , "2nd" = 75, "3rd" = 70, "4th" = 60)
barplot_tab
```

```
## 1st 2nd 3rd 4th
## 80 75 70 60
```

```
barplot(barplot_tab,
        main = "Enrollment of BS Computer Science",
        xlab = "Curriculum Year",
        ylab = "Number of Students")
```

Enrollment of BS Computer Science

2. The monthly income of De Jesus family was spent on the following: 60% on Food, 10% on electricity, 5% for savings, and 25% for other miscellaneous expenses. # a. Create a table for the above scenario. Write the codes and its result.

```
matters <- c("Food", "Electricity", "Savings", "Miscellaneous_expenses")
spent <- c(60, 10, 5, 25)
```

```
monthly_data <- data.frame(
  matters,
  spent)
```

```
monthly_data
```

```
##           matters spent
## 1           Food    60
## 2      Electricity    10
## 3           Savings     5
## 4 Miscellaneous_expenses 25
```

```
tab_data <- table(monthly_data)
tab_data
```

```
##           spent
## matters      5 10 25 60
## Electricity  0  1  0  0
## Food         0  0  0  1
## Miscellaneous_expenses 0  0  1  0
## Savings      1  0  0  0
```

b. Plot the data using a pie chart. Add labels, colors and legend. Write the codes and its result.

```
data_per <- round(spent/sum(spent) * 100, 1)
data_per <- paste(data_per,"%",sep = "")

data_pie <- pie(spent,
  main = "Month Data",
  col = rainbow(4),
  labels = data_per, cex = 0.8)
data_pie

## NULL

legend(1.3,1.5, c("Food","Electricity","Savings","Miscellaneous expenses"),
  cex = 0.8,fill = (rainbow(4)))
```

3. Open the mtcars dataset

a. Create a simple histogram specifically for mpg (miles per gallon) variable. Use \$ to select the mpg only. Write the codes and its result.

```
data("mtcars")

data_mtcars <- (mtcars$mpg)
data_mtcars

## [1] 21.0 21.0 22.8 21.4 18.7 18.1 14.3 24.4 22.8 19.2 17.8 16.4 17.3 15.2 10.4
## [16] 10.4 14.7 32.4 30.4 33.9 21.5 15.5 15.2 13.3 19.2 27.3 26.0 30.4 15.8 19.7
## [31] 15.0 21.4

hist(data_mtcars, breaks=12)
```

b. Colored histogram with different number of bins. `hist(mtcars$mpg, breaks=12, col="red")` Note: `breaks=` controls the number of bins.

```
hist(data_mtcars, breaks=12, col="pink")
```

Histogram of data_mtcars

c. Add a Normal Curve `x <- mtcars$mpg <- hist(x, breaks = 10, col = "red", xlab = "MilesPerGallon", main = "HistogramwithNormalCurve")` `xfit <- seq(min(x), max(x), length = 40)` `yfit <- dnorm(xfit, mean = mean(x), sd = sd(x))` `yfit <- yfit * diff(hmids[1:2])*length(x)` `lines(xfit, yfit, col="blue", lwd=2)` Copy the result.

```
data_curve <- data_mtcars
data_curve
```

```
## [1] 21.0 21.0 22.8 21.4 18.7 18.1 14.3 24.4 22.8 19.2 17.8 16.4 17.3 15.2 10.4

## [31] 15.0 21.4
```

```
data_hist <- hist(data_curve, breaks=10, col="pink", xlab="Miles Per Gallon",
main="Histogram with Normal Curve")
```

```
xfit<-seq(min(data_curve),max(data_curve),length=40)
```

```
yfit<-dnorm(xfit,mean=mean(data_curve),sd=sd(data_curve))
```

```
yfit <- yfit*diff(data_hist$mids[1:2])*length(data_curve)
```

```
lines(xfit, yfit, col="red", lwd=2)
```

Histogram with Normal Curve

```
data_hist
```

```

## [1] "histogram"
```

4. Open the iris dataset. Create a subset for each species.

a. Write the codes and its result.

```
data("iris")
data_iris <- data.frame(iris)
data_iris
```

##	Sepal.Length	Sepal.Width	Petal.Length	Petal.Width	Species

b. Get the mean for every characteristics of each species using `colMeans()`. Write the codes and its result. Example: `setosa <- colMeans(setosa[apply(setosaDF,is.numeric)])`

```
setosa <- colMeans(data_setosa[apply(data_setosa,is.numeric)])
setosa
```

```
## Sepal.Length Sepal.Width Petal.Length Petal.Width
##           5.006           3.428           1.462           0.246
```

```
versicolor <- colMeans(data_versicolor[apply(data_versicolor,is.numeric)])
versicolor
```

```
## Sepal.Length Sepal.Width Petal.Length Petal.Width
##           5.936           2.770           4.260           1.326
```

```
virginica <- colMeans(data_virginica[apply(data_virginica,is.numeric)])
virginica
```

```
## Sepal.Length Sepal.Width Petal.Length Petal.Width
##           6.588           2.974           5.552           2.026
```

#c.Combine all species by using `rbind()`

```
rbinddata_iris <- rbind(setosa, versicolor, virginica)
rbinddata_iris
```

```
##           Sepal.Length Sepal.Width Petal.Length Petal.Width
## setosa           5.006           3.428           1.462           0.246
## versicolor       5.936           2.770           4.260           1.326
## virginica        6.588           2.974           5.552           2.026
```

#d. From the data in 4-c: Create the `barplot()`.Write the codes and its result.The barplot should be like this.

```
barplot(height = as.matrix(rbinddata_iris),
        main = "Data Iris",
        xlab = "Characteristics",
        ylab = "Mean Scores",
        beside =TRUE,
        col = rainbow(3)
)
```
